

Premium engine coolant concentrate  
for modern high-performance engines

## Technical Information

**FROSTOX® HT12®**

**HAERTOL**  
Chemie GmbH

## Characteristics of FROSTOX® HT12® Concentrate

<b>Boiling point</b>	> 165 °C	ASTM D 1120
<b>Pour point</b>	< -15 °C	DIN ISO 3016
<b>Density (20 °C)</b>	1.123–1.128 g/cm³	DIN 51757
<b>Viscosity (20 °C)</b>	24–28 mm²/s	DIN 51562
<b>Refraction nD20</b>	1.430–1.436	DIN 51423
<b>pH value (20 °C)</b>		
• <b>Concentrate</b>	8.0–8.5	ASTM D 1287
• <b>33 vol. %</b>	8.3–8.5	ASTM D 1287
<b>Water content</b>	max. 4 %	DIN 51777
<b>Flash point</b>	> 100 °C	DIN 51758
<b>Reserve alkalinity</b>	> 10 ml 0.1 m HCl	ASTM D 1121

The above data represent average values that were valid when this Technical Information Bulletin went into print. They do not have the status of a product specification. Specified values are the subject of a special leaflet.

## Properties

FROSTOX® HT12® is the most advanced monoethylene-glycol-based premium antifreeze concentrate in the FROSTOX® series. The underlying Si-OAT corrosion protection technology contains no monocarboxylic acids and fulfills the requirements of state-of-the-art high-performance engines in terms of thermal stress, long-term stability, and long-term corrosion protection in a special manner. FROSTOX® HT12® contains no nitrites, amines, phosphates, molybdates, or borates. The high levels of silicate stability and tolerance with respect to flux residues are particular highlights.

## Application concentration:

It is recommended that FROSTOX® HT12® be used at a mixture ratio of 40 % (v/v) to 55 % (v/v); a mixture ratio of 50 % (v/v) is generally used. In cases of more than 58 % (v/v), frost protection is reduced. A mixture with potable water or mixed water (addition of DI water) containing the following limit values is recommended:

<b>pH value</b>	pH scale	6.0 - 8.0
<b>Hardness of water</b>	°dH	< 20
<b>Calcium</b>	mg/l	< 60
<b>Chloride</b>	mg/l	< 40
<b>Sulphate</b>	mg/l	< 50
<b>Fluoride</b>	mg/l	< 50

## Approvals

FROSTOX® HT12® has the following approval codes:

- VW TL 7741 (G12evo)
- BMW LC18
- MAN 324 SiOAT evo

## Anticorrosion effect

FROSTOX® HT12® meets all requirements of ASTM D3306 – especially the corrosion tests according to ASTM D1384 and ASTM D4340, as well as many other tests.

ASTM D 1384 FROSTOX® HT12® 50 % (v/v) DI water:

Material	Average change of weight
Copper (SF Cu)	-0.1 g/m²
Soft solder (L Sn 30)	-0.1 g/m²
Brass (MS 63)	±0.0 g/m²
Steel (HII)	±0.0 g/m²
Cast iron (GG 26)	±0.0 g/m²
Cast aluminium (G-AlSi6Cu4)	-0.4 g/m²

ASTM D 4340 FROSTOX® HT12® 25% (v/v) DI water with NaCl: Weight loss: 0.5 mg/cm²/week

## ASTM D 2570 FROSTOX® HT12®

Material	Average change of weight	Limit value
Copper	1 mg	20 mg
Soft solder	2 mg	60 mg
Brass	1 mg	20 mg
Steel	1 mg	20 mg
Cast iron	1 mg	20 mg
Cast aluminium	2 mg	60 mg

## ASTM D 2809 FROSTOX® HT12®:

Pump rating: 10 (requirement min. 8)

ASTM D 1882 paint compatibility:

FROSTOX® HT12® is not aggressive towards lacquers.

ASTM D 1881 foam test:

FROSTOX® HT12® does not foam under the conditions of ASTM D 1881.

## Compatibility with sealing materials

FROSTOX® HT12® is generally compatible with the following types of material:

- FKM
- HNBR
- EPDM
- PP
- PA-GF
- VMQ

This list does not guarantee compatibility with all existing products in these classes. It is recommended that the products intended for use should be tested beforehand. As FROSTOX® HT12® is based on ethylene glycol, materials sensitive to alcohol (e.g. PU and soft PVC) should not be used.

## Storage stability

FROSTOX® HT12® has a shelf life of at least five years in airtight containers. It must not be stored in galvanised containers.

## Delivery form and packaging

FROSTOX® HT12® is available as a concentrate or as a ready mix (50 % (v/v)) according to customer specifications, supplied in road tankers, in 1,000-litre IBCs, in 200- or 60-litre drums, and in non-returnable 20- or 5-litre PE canisters as well as 1-litre PE bottles.

The packaging possible is dependent on the order volume.

## Antifreeze effect of FROSTOX® HT12®/water mixtures

The **freezing point**, colloquially called 'antifreeze', is a measure for the freezing point depression effect of antifreeze fluids. When a given FROSTOX® HT12®/water mixture is cooled down, the freezing point is the temperature at which initial ice crystals begin to form. The resulting ice slurry does not possess any expansive force. Further reduction in temperature causes further thickening of the ice slurry until it solidifies at the **pour point**. It is only below this temperature that there is a risk of the installation bursting. The arithmetic mean value of the freezing point and the pour point is called frost protection. The following table shows the freezing points, frost protection, and pour points of FROSTOX® HT12®/water mixtures as a function of the concentration:

FROSTOX® HT12® Concentrate	Freezing point (acc. ASTM D 1177)	Frost protection (calculated)	Pour point (acc. DIN 51583)
20 vol. %	-9.0 °C	-11.0 °C	-13.0 °C
25 vol. %	-12.3 °C	-14.8 °C	-17.3 °C
30 vol. %	-16.1 °C	-19.1 °C	-22.0 °C
35 vol. %	-20.4 °C	-23.7 °C	-26.9 °C
40 vol. %	-25.2 °C	-28.6 °C	-32.0 °C
45 vol. %	-30.8 °C	-33.4 °C	-37.2 °C
50 vol. %	-37.6 °C	-40.7 °C	-45.2 °C
55 vol. %	-45.4 °C	< -50 °C	< -50 °C
58 vol. %	< -50 °C	< -50 °C	< -50 °C
